## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the first paragraph of 35 U.S.C. 112:

~~The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.~~

Claims 1-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not clearly set forth how tension is produced in the longitudinal web to hold the wiper strip. While it appears that the width of the rails plus the width of the web being greater than the width of the inner edges of the first L-leg would provide for compression of the web or possibly tension in the holder, it is unclear how this would develop tension in the web of the wiper strip. Clarification is requested.

*Response to Arguments*

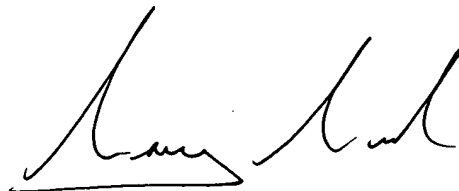

Applicant's arguments filed 10 April 2003 have been fully considered but they are not persuasive. Applicant's introduction of the web being in tension does not appear to be taught by the art of record. However, as set forth above, it does not appear applicant's web is actually in tension. Since "tension" language was present in claim 14, this action will not be made final. Note that patents do teach compression of the web (for example, Oishei '123). Turning to applicant's other arguments that his holder is not a carrying bracket frame but a hinge-free wiper blade, nothing in the claims appear to limit the holder as such. Applicant could set forth or add that the holder is a ---one piece--- holder which is provided with means for connection of a wiper arm and arranged at an upper strip surface of the carrying rails. Applicant also argues that the rails must be introduced into their longitudinal grooves of the wiper strip in a lateral direction. However, there is no language in the claims limiting the rails to such a manner of insertion in the grooves.

*Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary K Graham whose telephone number is 703-308-1270. The examiner can normally be reached on Tuesday to Friday (6:30-4:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Warden can be reached on 703-308-2920. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
